

SIMATS ENGINEERING

CO3-SCENARIO BASED ASSIGNMENT

COURSE CODE: CSA 4301

COURSE NAME : internet programming

NAME: Ganesh Reddy

Reg.no: 192311153

Question 1: C) service()

Explanation: service() provides unified handling of HTTP requests.

Question 2: C) init()

Explanation: init() runs once during servlet initialization.

Question 3: B) POST

Explanation: POST sends sensitive form data in the request body rather than the URL.

Question 4: B) GET

Explanation: GET places parameters in the URL, making them bookmarkable and shareable.

Question 5: C) HttpSession

Explanation: HttpSession stores session data on the server side.

Question 6: B) Cookies

Explanation: Cookies store lightweight client-side information and can persist across visits.

Question 7: B) Session cookie

Explanation: A session cookie normally disappears when the browser session ends.

Question 8: B) JDBC

Explanation: JDBC provides the standard Java API for database connectivity and SQL execution.

Question 9: B) Statement

Explanation: Statement is used to send SQL statements to the database.

Question 10: C) ResultSet

Explanation: ResultSet stores rows returned by a SELECT query and supports traversal.

Question 11: B) Scriptlet

Explanation: A scriptlet embeds Java statements in a JSP using `<% ... %>`.

Question 12: B) Include Directive

Explanation: The include directive allows reusable content such as headers and footers.

Question 13: B) JSTL

Explanation: JSTL provides tag-based logic and reduces Java code in JSP pages.

Question 14: B) `<c:forEach>`

Explanation: `<c:forEach>` is used to iterate over collections or lists.

Question 15: B) Web container

Explanation: Tomcat acts as a web/servlet container that manages servlets and requests.

Question 16: C) `destroy()`

Explanation: `destroy()` is used to release resources before a servlet is removed.

Question 17: B) Single instance handles requests

Explanation: Normally, one servlet instance handles multiple requests.

Question 18: B) Deleted automatically

Explanation: Session data is removed when the session expires.

Question 19: B) Session ID

Explanation: URL rewriting adds the session ID to the URL when cookies are unavailable.

Question 20: B) `getConnection()`

Explanation: `DriverManager.getConnection()` is used to establish a database connection.

Final Answer Key

1-C, 2-C, 3-B, 4-B, 5-C, 6-B, 7-B, 8-B, 9-B, 10-C, 11-B, 12-B, 13-B, 14-B, 15-B, 16-C, 17-B, 18-B, 19-B, 20-B
